Summary

Software Engineer with 3+ years building scalable backend platforms and production-grade APIs using Ruby on Rails, GraphQL, Node.js, and AWS. Experienced in designing database-backed systems, optimizing SQL performance, and delivering reliable REST and GraphQL services for high-volume workflows. Strong understanding of backend components, structured Agile delivery, well-documented PRs, and CI/CD deployments using GitHub Actions. Resourceful problem solver who partners with cross-functional teams to improve platform stability, implementation quality, and operational readiness.

Experience

Software Developer 1 Aug 2023 – Present
Dayspring Technologies, Bangalore

- Developed and maintained scalable backend applications and REST APIs with Ruby on Rails, delivering reliable integrations for high-volume platform workflows.
- Designed and optimized database schemas and SQL queries, improving application performance by 30% and reducing response times for core data flows.
- Built reusable backend modules and API service patterns that supported integrations with Shopify, Facebook Ads, Google Ads, Klaviyo, Pinterest, and Mailchimp.
- Collaborated closely with frontend engineers to integrate user-facing features with backend services and maintain consistent API contracts.
- Owned production readiness for staging and deployment pipelines, using GitHub Actions-based CI/CD, AWS hosting, and automated release validation.
- Investigated and resolved production issues through log analysis, debugging, and root-cause identification, then proposed process improvements.
- Participated in sprint planning, estimation, code reviews, and Jira-driven task tracking to keep work organized, transparent, and ready for review.
- Practiced secure coding and performance optimization to improve application stability, scalability, and operational support.

Projects

Food Delivery Application React, Node.js, Tailwind CSS, Swiggy API

- Developed a dynamic web application integrating external APIs for real-time menu and order data.
- Built REST APIs using Node.js to power restaurant listing, search, and user interactions.
- Implemented state management with Redux Toolkit to support scalable frontend data flows.
- Created reusable components and optimized routing for maintainability.

LearnHub: E-Learning Platform Django, JavaScript, HTML, Bootstrap

- Developed backend features for class scheduling, attendance tracking, and course management.
- Integrated real-time code execution support for multiple languages.
- Structured the platform for modular scalability and easier maintenance.

Technical Skills

Languages: Ruby, JavaScript, Python, SQL, Java, C/C++
Backend & APIs: Ruby on Rails, REST APIs, GraphQL, Node.js, Docker
Databases: PostgreSQL, MySQL, SQL query tuning, schema design
DevOps: GitHub Actions, AWS (EC2, S3, Redshift), CI/CD, Docker
Tools: GitHub, GitLab, Postman, Linux, Jira
Concepts: Scalable systems, backend architecture, app servers, caches, Agile planning, code reviews, secure development

Education

B.Tech in Computer Science and Engineering Aug 2019 – May 2023
PES University, Bangalore

Achievements

- Best Newcomer Award – Dayspring Technologies
